"The long, fine root system of **Fortuniana** is an ideal rootstock for sandy soils. The extensive fine roots enable the plant to absorb the nutrients and water it needs to produce food for growth. The more vigorous a root system, the more food it can transfer to the plant. The more food it can transfer to the plant, the faster it grows. Hence, the rose grows faster and the sizes of the flowers are also greatly increased. As an added bonus, the roots of **Fortuniana** are very resistant to the many varieties of nematodes found in our sandy soils.

Orders will be delivered prior to the NRS monthly meeting, Tuesday, April 6, 2010. Plants will be in 2 gallon pots ready for planting. You will be notified prior to delivery. ROSES MUST BE PICKED UP. NRS DOES NOT SHIP OR DELIVER PLANTS.
